**(54) Repository and monitoring system therefor**

(57) A repository including: an input unit (3) for setting the temperature of the interior (2) of a repository (1); a measuring unit (5,6) for measuring the temperature of the interior of the repository (1); a controller (4) for holding ID data to specify the repository itself and communicatively outputting the measurement data to the external; and an auxiliary power source (13) for communicating the measurement data to the external even during interruption of power supply. A central controller 11 for collecting the measured data from each repository and judging whether abnormality occurs or not is connected to plural repositories to fabricate a monitoring system. When abnormality is detected, the measured data as well as ID data and time data are transmitted to a user through the Internet.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 01 10 7698

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
